GPS Vehicle Tracking

Protects Vehicle & Occupants

Definition of Features

All Alarms Sent To Your Phone & Email

(Cell Phone Notifications Require Cell Service to Your Cell Phone)

Features	Definition
Security Alarm	Obtain immediate call and email of a possible theft by knowing when your car alarm is triggered.
Towing Alarm	Know when your vehicle, quad or boat is being moved while the ignition is off.
Location Request	A map on the screen will enable you to view vehicle location, speed and direction.
Vehicle Disable	Disable vehicle if it is stolen, and receive its location , speed and heading. Vehicle starter can be remotely disabled. Optionally, the unit can be configured to de-energize the vehicle ignition system, disabling the engine immediately.
Excessive Speed	Know when your vehicle is being driven at excessive speeds (i.e. 80 mph for more than 30 seconds)
Tracking	Sends reports every 5 minutes with a maximum of 6 reports, or every 5 minutes up to 30 minutes

Definition of Unit Features

Features	Definition
Border Crossing	Know when the vehicle has crossed the US-Canadian or US-Mexican border.
Battery Disconnect	Sends a report (to cell or e-mail) if battery is disconnected from vehicle.
Low Battery	Know when your vehicles battery power has been depleted to a severely low level.
Unlock Doors	Unlock the driver door of your vehicle.
Heart Beat	Receive an automatic location report every 30 days that your Mobile IQ unit is fully functional.
Starter Enable	Enable your vehicle once it is in a secure state.

Installation

- Basic Locate Track Function - Installation takes less than 30 minutes. Requires only two power feeds and ground.**
- Theft Alarm Notification – Requires one wire connection from vehicle alarm system to GPS unit. A separate vehicle alarm system is required. An optional relay and buzzer kit (\$40) will allow a vehicle's interior lamp door switch to alarm the system.**
- Vehicle Disable & Unlock – Allow additional 30-60 minutes installation time for connection to vehicle wiring.**

The antenna (pictured with cable) is designed to be mounted under the carpet on the rear deck, or under a dashboard. This flat antenna is perfect for security applications that require the use of a hidden antenna.
